## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a method for separating disc-shaped bodies, classified in class 83, subclass 35.
- II. Claims 7-12, drawn to an apparatus for separating disc-shaped bodies with the additional lamp control, classified in class 83, subclass 76.6.
- III. Claims 14-19, drawn to an apparatus for separating disc-shaped bodies with the additional relative material in the tunnel and diffuse radiation, classified in class 83, subclass 520.

2. It should be noted that claim 6 is common to Groups II and III. If one of the groups II and III are elected, claim 6 will be examined with that group. Should claim 6 be ultimately determined to be allowable without the subject of the depending claims, rejoinder of said depending claims will be considered.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions of Groups I and II/III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus such as an apparatus not having the specific control for the lamps or the relative tunnel.

Art Unit: 3724

4. Inventions of Groups II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group II has separate utility such as it could be used without the specific relative tunnel with a first region in which the lamps deliver diffuse radiation with an intensity which is reduced towards the face and a second region in which the lamps deliver radiation away from the face. Conversely, the invention of Group III has separate utility such as it could be used without the specific control for the lamps and memory storage settings. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
